

1

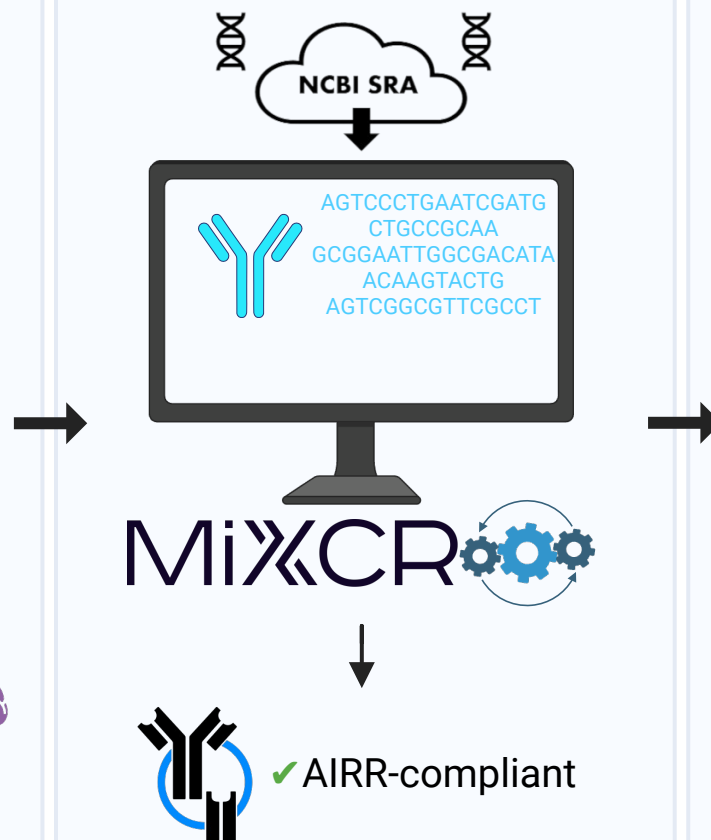

Data Collection

- 11 independent studies
- Bulk and single-cell
- Diverse MS clinical phenotypes

2

Uniform Processing

- Pre-processing from raw data
- Uniform MiXCR-based annotation
- Harmonized clinical and technical metadata

3

Database construction

5.4M BCR sequences

11 studies | 114 patients | 6 tissues

- **First** harmonized MS BCR database
- Enable cross-study analysis
- Enhanced discovery through data aggregation
